

3I Find a k -Universal Circular String

k -Universal Circular String Problem

Find a k -universal circular binary string.

Input: An integer k .

Output: A k -universal circular binary string.

Formatting

Input: An integer k .

Output: A binary string representing a k -universal circular string.

Constraints

- The value of k will be between 1 and 10^1 .

Test Cases

Case 1

Description: The sample dataset is not actually run on your code.

Input:

3

Output:

00111010

Case 2

Description: The sample dataset is not actually run on your code.

Input:

4

Output:

1010111100100001

Case 3

Description: A larger dataset of the same size as that provided by the randomized autograder.
